Mike-

The two borings we discussed this morning will be sufficient for delineating the floor around location BC-2 necessary for disposal; however, I was just thinking about delineating the area for disposal. In thinking about it further, I recommend you also collect a subslab sample near S11-22 to represent the rest of the floor to the east in Building B to justify reuse. Since S11-22 had contamination at 15 feet and the locations further east had no contamination identified in the borings, I think a clean subslab at S11-22 would justify reuse of the rest of Building B concrete.
